--according to the method of the present invention for connection setup for mobile stations of a radio communication system having at least one base station, frequency channels for a random access are recurrently offered in an upstream direction for the mobile stations. With the mobile station that requests a connection setup, a reception power of a signal sent from the base station in a downstream direction is measured. With the mobile station, a transmission power dependent on the measured reception power for sending an access radio block to the base station is set. A mobile station and a base station are provided for implementation of the above method.--
